***Election/Restrictions***

1. This application contains claims directed to the following patentably distinct species of the claimed invention:
  - a) **Species I, Claims 1-18, 22, 24, 35: A Method for closed loop control in chemical mechanical polishing (CMP) using an inline metrology comprising measuring at a metrology station metal feature thickness at multiple points across a first wafer wherein the first wafer is one of a plurality of wafers.**
  - b) **Species II, Claims 19-21, 29-34 : A method for closed loop control in CMP using an inline metrology comprising polishing a first wafer from a plurality of wafers on a CMP apparatus using a set of polishing parameters; measuring the profile of the first polished wafer at a metrology station, the profile including at least a first measurement of dielectric thickness in a first array, a second measurement of dielectric thickness in a second array, a first measurement of dielectric thickness in a first field, and a second measurement of dielectric thickness in a second field, where the first array is proximate to the first field and the second field is proximate to the second array.**
  - c) **Species III, Claims 23, 26-28: A method for closed loop in CMP using an inline metrology station comprising measuring metal residue and barrier material residue on a first wafer, where the metal residue and the barrier material residue are located on field dielectric material and metal features.**

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claims is finally held to be allowable. Currently, no claims is generic.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is all claims are generic is considered non responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. 1.141. If claims are added after the selection, applicant must indicate which are readable upon the elected species. M.P.E.P. 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other invention.

2. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filled petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).
